Sampling

Sampling Procedure

The sampling frame of the HSES was developed by the NSO based on population figures for 2005 from local registration offices. This updated sampling frame is crucial because the spatial distribution of the population had changed dramatically over the last years and any frame based on the Census 2000 would have not been relevant anymore.

The design of the survey recognizes three explicit strata: Ulaanbaatar, aimag centers, and rural areas and small towns. In addition, the sample was implicitly allocated by districts and khoroos in Ulaanbaatar, and by aimags in rural areas. Each aimag center was an explicit sub-stratum. The aimag of Govisumber was excluded from the sample due to its small size.

The selection strategy was different in each stratum: a two-stage process in urban areas and a three-stage process in rural areas. In Ulaanbaatar, first 360 khesegs were selected, and then 10 households in each kheseg. In aimag centers, first 12 or 24 bags were selected, and then 10 households in each bag.35 In rural areas, first 52 soums were selected, then 12 bags in each soum and finally 8 households in each bag. All 1,248 primary sampling units or clusters (khesegs, bags or soums) were selected with probability proportional to size and were randomly allocated into the 12 months of survey fieldwork. Thus the survey visited a random sub-sample of 104 clusters each month.

The use of this sampling procedure means that households living in different areas of the country have been selected with different probabilities. Therefore, in order to obtain representative statistics for each stratum and for the whole country, it is necessary to use sampling weights. These weights are applied to each household and correspond to the inverse of the probability of selection, calculated taking into account the sampling strategy.

The sample of 11,232 households was allocated as follows: 3,600 in Ulaanbaatar, 2,640 in aimag centers and 4,992 in rural areas and small towns. However, the actual sample used for this report is slightly lower: 3,571 households in Ulaanbaatar, 2,621 in aimag centers, and 4,980 in rural areas and small towns. The difference corresponds to 60 households that were excluded because they did not have complete information.

Questionnaires

Overview

The questionnaire of HSES 2007/08 contains 15 major modules: basic socio-economic information about the members of the household, education, health, reproductive health, migration, employment, wage jobs, job search, agriculture and herding, non-farm family businesses, other income, savings and loans, housing and energy, durable goods, nonfood expenditures and food consumption. Also contains 4 additional modules: purchases of food during the past month for urban households (by recall), consumption of food and other frequenty purchased commodities for urban households (from diary), purchases of food during the part month for rural households, consumption of food during the past 7 days (by recall) for rural households.

DATA COLLECTION NOTES

The overall data quality is to be considered of good standard. On the one hand, the large amounts of information that the HSES collects from households imposed new demands on operational strategies and data management compared to the previous HIES.

Data Processing

Data Editing

All procedures were streamlined and centralized, which is likely to have had a positive impact on the quality of the information. On the other hand, three different rounds of consistency checks were applied to the data: first during the data entry process, then during the compilation of the raw data files and finally during the preparation of this report. In all cases it was possible to compare these listings against the actual questionnaires filled out by the households (and at least during the first round of checks, some households were visited again) and the data were amended whenever a mistake was found.Databases for the HSES 2007/08 have been unified and data error checking was made (by using STATA program) in cooperation with working group.
