Sampling

Sampling Procedure

Sampling frame

The TUS is a household based survey. Therefore, households are defined as sampling unit. The total sample size determined as 4,000 households or 0.5 percent of total households, representing the entire households in Mongolia. Since the survey covered 4 quarters, sample size was divided into four equal parts for four quarters.

Excluded are the Mongolian citizens residing outside the country or in military camps, orphanages, care centers, hospitals, prisons and other correctional institutions for more than six months.

All 8 provinces and 8 districts from Ulaanbaatar representing the five regions of Western, Khangai, Central, Eastern and Ulaanbaatar, that was surveyed.

Sampling method

The sampling design used a two-stage sampling method.

1. Stage 1: The proportionate number of households for each of the 5 regions of Mongolia was determined using probability sampling method. Following this method, it was established that there should be 640 HHs from the Western region, 800 HHs from Khangai region, 800 HHs from Central region, 560 HHs from Eastern region, and 1200 HHs from Ulaanbaatar. The lowest administrative units, kheseg of khoroo for Ulaanbaatar, bagh of soum for aimags (provinces), were defined as primary sampling units (PSUs).

In total, 200 PSUs were selected with probability proportional to size.

2. Stage 2: After household listing of the selected PSUs was carried out by the statistical departments or divisions, 20 households were selected using systematic sampling from each PSU.

Sample household

Primary data collection unit of the survey is the household because the TUS is a household based survey. 13626 people from 3990 households' selected 14173 people from 4000 households were participated in the study.

Age over 12 years, 6914 people from selected 10091 people was fully participated in data collection of the survey and was answered in individual questionnaire.

Questionnaires

Overview

In line with the survey objectives and coverage if the survey, the questionnaires and manual were developed based on recommendations and methodology of EUROSTAT and UN Statistics Division and other countries' experiences. Pilot survey was conducted covered 50 households in order to pretest clearness of questionnaire, coherence between questions and define average time spent for interviewing one household.

There were two questionnaires:

- 1. TUS-1 refers to the Household and Individual questionnaire which contains questions on household listing, type of dwelling, water and sanitation, main source of electricity and heating, assets for households; education information, marital status, health status and employment status for people age 12 years and over.
- 2. TUS-2 refers to the Diary. This contains questions on daily activities and time spent for those activities.

Data Collection

DATA COLLECTION NOTES

Data collection started in March and ended on the third week of December 2015. The fieldwork was conducted in every third week of March, June, September and December in 2015. Reference period was the "last week" or the week in which the survey took place. All days of week were covered in the diary.

Data Processing

Data Editing

Data Editing

The methods was used in combination for data collection process from the selected households, that are the computer assisted personal interview (CAPI) and paper assisted personal interview (PAPI).

Specifically, the researchers take the questionnaire from households and individuals using tablet. Diary of paper forms was checked in the household and edited into computer.

Data gathered from the field were coded and activities were classified according to the "International Classification of Activities for Time Use Statistics" developed by UNSD. (Annex-2)

The average time spent on each activity was calculated by all charecteristics, such as by population, by specific groups of the population, by age, by sex, by urban and rural areas and by regions.
